Collection

**2025** 

Created in 1947 by Pierre Jallatte, the inventor behind the European concept of the safety shoe which he had discovered in the United States, ever since it was founded, the Jallatte® company has been located in the Gard municipality of Saint-Hippolyte-du-Fort, sheltered in a 17th century fort inspired by Vauban, which became the historical site of Jallatte® four centuries later.

For 78 years, Jallatte® has established itself as the leader on the safety shoe market, by focusing on innovation and research into technical performance, in order to guarantee protection for people at work, to keep them healthy and to improve their well-being.

Jallatte® has been able to find a delicate balance between technology, safety, comfort and design, by offering complete ranges that meet the needs of the harshest environments while confirming the good taste of anyone who wears them.

Today, its design efforts are focused on preventing risks of DMS (Musculoskeletal Disorders) thanks to innovative materials and new technologies in multi-density soles covered by international patents.

After safety, comfort and design, Jallatte® is paving the way for anti-fatigue performance with an ergonomic approach adapted to all body shapes and working situations.

Jallatte®, creating well-being since 1947

#### WHAT IS CSR?

The European Commission defines corporate social responsibility (CSR) as a concept whereby companies integrate social and environmental concerns in their business operations and in their interaction with their stakeholders on a voluntary basis.

"A company that adopts CSR therefore seeks to have a positive impact on society while also being economically viable".

Source: economie.gouv.fr, July 2022

For several years, Jallatte has been committed to a world more respectful of people and the environment with its CSR initiative called J-CLEAN.

#### **▶** WHICH CSR INITIATIVES HAS JALLATTE PUT IN PLACE?

- The relocalisation of part of production to the historical site of Saint Hippolyte du fort in the Gard region
- 2. The creation of collections of safety shoes certified as carbon neutral by Bureau Veritas according to international standard PAS 2060, and made in France
- 3. Our commitment to a plan to reduce our carbon footprint in the long term certified according to the requirements of standard PAS 2060 (reducing our energy consumption and using green electricity)
- 4. The development of local employment and expertise
- 5. The maintenance of gender equality at the company with a score of 87 points out of 100 on the gender pay gap index, which is 12 points above the legal minimum set by the "Professional Future" Law of 5 September 2018 and its implementing decree No 2021-262 of 10 March 2021
- 6. The adoption of social benefits and the development of a programme for quality of life at work to improve well-being at work and the company's performance
- 7. A strategy to control costs and to manage pricing helping take profitable market shares and guaranteeing the company's longevity
- 8. The priority given to local suppliers and service providers whenever possible
- 9. A plan to reduce our waste by setting up sorting solutions and a composter
- 10. The protection of the environment and maintenance of the ecosystem by setting up bee hives around Jallatte fort

The solid initiatives we are implementing as part of J-CLEAN make Jallatte a committed and responsible player in a societal and environmental process aimed at improving the well-being of our employees and users, while also preserving the planet!

ASSEMBLY MADE IN FRANCE

Transparent about designations of origin means we have to communicate clearly and unambiguously for our retail customers and end users.

Too many people on the market hide their manufacturing origins or remain vague, making it impossible to build trust in long-term customer relationships.

Here at Jallatte, our process is clear: we have decided to very clearly indicate any items in our catalogue with a Blue, White and Red pictogram, whose upper and sole assembly is guaranteed to be "Made in France".

The others without a pictogram can come from our site in the Cévennes, depending on our manufacturing programmes, or from one of our factories in Tunisia which are 100%

integrated and controlled by our Group structure. We should point out that all of our uppers are cut and sewn in these workshops clearly indicated as "UPPER Made In Tunisie", meaning we are not eligible for this declaration.

All these declarations clearly stated in our communication tools and on the regulatory labels of our products are naturally to make Jallatte a transparent and responsible

manufacturer that wants to develop its customer relationship according to the values of mutual respect and long-term trust.

# THE CONCEPT

Being a spokesperson for a world that is more respectful of people and the environment, Jallatte has been committed to an extensive CSR plan for several years, called J-Clean which involves:

- ▶ Relocating part of the production to the historic factory in Saint-Hippolyte-du-Fort
- Using local know-how
- Adopting a responsible purchasing policy

To combat global warming and the natural disasters it causes, the mission set by the United Nations is clear:

According to the United Nations, becoming carbon neutral involves 3 concrete actions:

- Measuring our carbon footprint
- Reducing this carbon footprint
- Offsetting what we have not yet been able to reduce

To address the climate emergency and to help reduce greenhouse gases, our SME from Gard is confirming its commitment to CSR, known as J-Clean, by creating a new generation of eco-friendly safety footwear: J'respect.

With J'respect, our production site based in Saint-Hippolyte-du-Fort has became the first and only factory in France, and in Europe, to manufacture Carbon Neutral-certified safety footwear!

# **MEASURE**

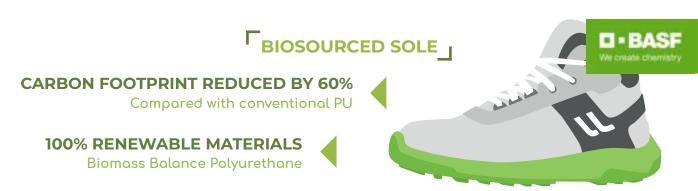

Nowadays, by analysing the complete life-cycle of our products, we can estimate that a traditional safety shoe accounts for more than 15kg of CO2 per pair.

# **REDUCE**

To take real action and to reduce our carbon footprint, we have launched our J-Clean CSR initiative and created the J'respect collection:

Developed in collaboration with BASF, this sole is designed from 100% renewable materials and without any fossil fuels. This is the Biomass Balance approach. The next-gen PU of the J'respect sole is made from recycling and fermenting organic waste.

Our CSR commitments and the creation of the J'respect collection have enabled Jallatte to reduce the CO2 emissions of a pair of safety shoes by an average of 10 to 20Kg, i.e. a carbon footprint reduced by 50% to 65% depending on the model!

# **OFFSET**

#### To become carbon neutral, the final pillar of our initiative is offsetting.

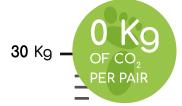

Jallatte is committed to this initiative of reducing greenhouse gases by financing, through the United Nations, a project to generate renewable energy in Laos.

By financing this project for the environment and society, Jallatte is meeting the sustainable development goals set by the United Nations.

20 Kg

10 Kg -

Thanks to our J-Clean initiative and to our complete measuring/reducing/offsetting, the J'respect collection can ultimately claim 0 kg of CO2 per pair.

We could not do it without the support and commitment of our partners and customers, all of us together, working for Zero Carbon!

#### **UPPER**

PUTEK® SPIDER technology uses new, highly abrasion-resistant yarns for greater tenacity and enhanced performance. These highly resistant, water-repellent fabrics enable us to produce ultra-lightweight, ultra-breathable S3 products. PUTEK® is made from 68% recycled polyester.

Recycled Aseptane microfiber impregnated with resins. This makes it exceptionally waterproof and breathable, as well as easy to clean and maintain. This microfiber is ideal for use in damp environments and against fluid splashes, and is made from 40% recycled polyamide.

Leather- and nubuck-look microfibers are made from 40% recycled materials. The velvet-look microfiber is made from 50% recycled materials.

#### LINING

Innovative, antibacterial technical lining that combines high performance breathability and abrasion resistance with a soft, comfortable feel. Its special 3-layer structure promotes thermoregulation to keep feet dry and comfortable. This lining is made from 66% recycled materials.

#### **INSOLE**

This removable comfort insole is made of 2 materials:

- ▶ A "SOFT" layer of Dynamic Biomass Balance polyurethane from BASF® with shape memory, heat-sensitive and active all over the foot.
- An integrated anti-fatigue "MAXI" size insert in Elastopan Biomass Balance from BASF®, the elastomer used in anti-fatigue mats.

SOFT insole in Dynamic polyurethane from BASF® with shape memory, heat-sensitive and active all over the foot.

Directly under the soles of the feet, SOFT improves weight distribution by cushioning pressure points and providing a positive energy return.

#### **ANTI-PUNCTURE INSERT**

Composite, non-magnetic and athermic anti-perforation insert made from 50% recycled polyester.

Antipuncture insert in non-woven fabric, 54% lighter than a standard insert, antistatic, sewn directly onto the upper and made from 77% recycled polyester.

# J-ROYAL

Inspired by leading sports brands, the J-ROYAL collection from Jallatte sets a new standard for comfort and safety in the workplace, with a touch of luxury.

Designed for demanding professionals, this range combines sportswear design with advanced technical innovations.

Designed to effectively combat strenuous work, the J-ROYAL collection guarantees absolute comfort, even in the most demanding conditions.

#### **UPPER**

Putek® CAP Technology uses newly developed high resistance abrasion yarns, woven directly into the fabric, to obtain high-tenacity and high-performance abrasion resistant fabrics. These highly resistant and water-repellent fabrics allow the creation of ultralight and ultra-breathable S3 products.

Water-repellent full-grain leather.

Microfibre is a material aesthetically similar to leather, made from extremely fine filaments of polyester, polyamide (nylon) or a mixture of the two. Lightweight, robust and durable, it offers excellent breathability, water resistance and abrasion resistance. It is easy to care for.

#### **LINING**

Lined in extremely supple calf leather in white, with a smooth grain finish and premium quality for absolute comfort and well-being.

#### **INSOLE**

SELECT' insole in extremely supple calf leather and Dynamic polyurethane from BASF® with shape memory, cushions pressure points, improves weight distribution and absorbs heel shock. Anatomically shaped and perforated, SELECT' ensures absolute comfort and well-being.

#### **ANTIPUNCTURE INSERT**

Extra-flexible insole made from high tenacity textile with a resistance of 1,100N, non-magnetic and athermic, which covers 100% of the surface of the foot. This anti-perforation material complies with standard EN ISO 22568-4:2021.

#### **INFINERGY® XL SOLE**

PU2D/E-TPU Infinergy by BASF® size XL with a low density of 0.19. Designed with an innovative material from the world of running, this triple-density outsole offers dynamic performance in 3 phases: shock absorption, energy accumulation and dynamic restitution. It's ideal for anyone who has to travel frequently or over long distances every day.

Sole J-ROYAL PU2D/E-TPU

infinergy of BASF®

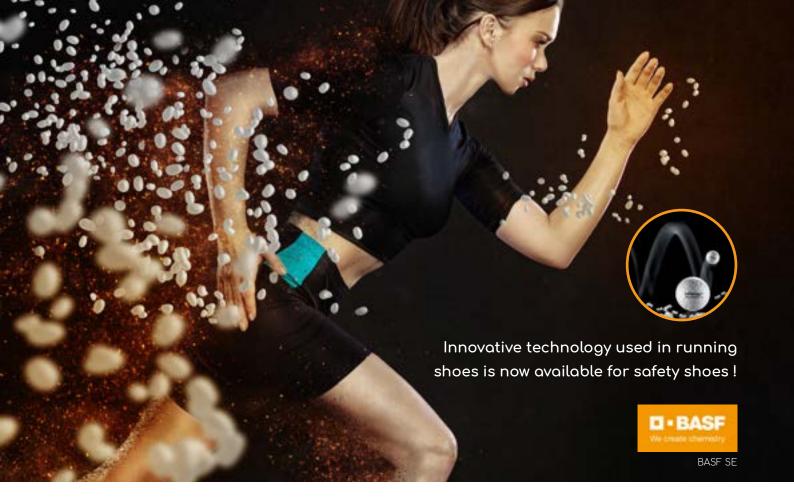

The safety trainers in the J-ENERGY collection allow you to save up to 1 hour of energy per day thanks to the INFINERGY® insert from BASF®. Already successfully used in running shoes, this innovative material has improved athletes' performance while reducing the feeling of fatigue.

And what if it were the same for safety shoe wearers?

For workers exposed to tiring work situations:

- Frequent journeys on foot
- Long distances travelled daily
- Prolonged standing

#### J-ENERGY safety footwear

- Returns more than 55% of the stored energy while walking
- Save one hour of energy per day
- Reduces feeling of fatigue
- Provides outstanding comfort due to the cushioning of the sole
- Absorb plantar pressure zones
- Prevents the risk of developing lower limbs MSDs (musculoskeletal disorders)

According to BVA biomechanical study no. 1095 carried out in 2020 by the CTC, wearing J-ENERGY safety shoes reduces leg muscle activity by 17%. Thanks to the BASF® Infinergy insert, the pushing-off phase of the foot is more efficient, which reduces the effort required and therefore saves one hour of energy per day.

Our « Energy » is valuable, let's protect it!

Sole Triple density with plantar distribution

pressure PU2D/ E BASF® Elastopan® from

All-round versatility that reduces tiredness and fatigue in all situations.

MAXI-Soft  $Duo^{TM}$  is an entirely innovative insole concept, designed especially for people who have to stand for many hours a day.

It combines an insole with a comfort layer, directly in contact with the sole of the foot

MAXI-Soft Duo<sup>™</sup> balances posture and provides an undeniable feeling of comfort, due to two associated technologies, which the user perceives directly at their workstation.

Its elastic deformation properties permits the insole to provide both progressive and prolonged cushioning throughout the step or while walking and a return of energy during the pressure stage on the foot for a guaranteed anti-fatigue effect.

The removible comfort insole is made of 2 materials:

A 'SOFT' BASF® dynamic polyurethane layer including memory foam, which is heat-sensitive and active over the entire surface of the foot.

Under the soles of the feet, SOFT improves weight distribution by reducing pressure points and the feeling of discomfort.

An integrated 'MAXI'-size anti-fatigue insert made of BASF® Elastopan, an elastomer that is used in anti-fatigue mats. Positioned beneath the base layer, this MAXI insert cushions and alleviates stress on the body, which is forced to stand upright for many hours a day, both while in motion and while walking, thus reducing the risk of MSDs (musculoskeletal disorders) in the lower limbs.

### ASEPTANE

Aseptane is a resin-soaked microfibre that has many properties:

- Exceptional waterproofing and breathability
- + Easy to clean and look after
- + Ideal for use in wet and splash-prone environments

Sole J-NUDE 2 PU/PU from BASF®

Lightness is an essential component of comfort. Thanks to new, ultra-light materials that maintain excellent technical performance, the HELIUM collection succeeds in guaranteeing the best "durability/weight" ratio, by reconciling workstation resistance with an unrivalled feeling of lightness.

Models in the HELIUM collection are ideal for use in less demanding environments, in transport, logistics, light industry, construction, retail and services.

#### **UPPER**

PUTEK® STAR technology uses new, highly abrasion-resistant yarns, for greater tenacity and enhanced performance, above and beyond normative requirements. These highly resistant, water-repellent fabrics enable us to produce ultra-lightweight, ultra-breathable S3 products.

Light microfiber with waterproofing and breathability performances comparable to standard leathers.

Highly abrasion-resistant, ultra-breathable CANVAS fabric for extended wear and optimum foot comfort.

#### **INSOLE**

SOFT Light insole made of ultra-light expanded polymer, placed directly under the soles of the feet, SOFT Light improves weight distribution by cushioning pressure points and providing a positive energy return.

#### **ANTI-PUNCTURE INSERT**

Composite anti-puncture insert made of non-woven fabric 54% lighter than a standard anti-puncture insert, compliant with standard 22568-4:2021, antistatic, sewn directly onto the upper and covering 100% of the foot for all-round protection. This insert is made from 77% recycled polyester.

# GORE-TEX

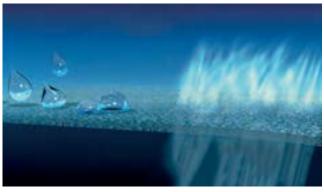

#### **PROTECTION & COMFORT**

The GORE-TEX® membrane – the hidden secret at the core of GORE-TEX® Footwear offers high climate comfort in all working weather conditions.

Water stays out while sweat escapes.

GORE-TEX® footwear keep your feet dry and comfortable.

To meet the specific requirements of climate, professional environment, activity level and end use, Gore has special laminates.

Jallatte has chosen Comfort & Performance laminate:

- Durable waterproof
- Breathable
- Moderate thermal insulation for a wide range of temperatures.

Ideal for changing weather and wide range of activities.

#### PROVEN QUALITY UNDER UNCOMPROMISING TESTING CONDITIONS

WATERPROOFNESS

GORE-TEX® Footwear has to withstand up to 300,000 flex movements (80 hours) in anklehigh water – without allowing one single drop of water to penetrate inside the boot. EN ISO standard inside the boot. EN ISO standard 20344 requires only 4800 flexes (80 minutes) and 3 cm2 water entry is allowed.

**BREATHABILITY** 

The materials used in GORE-TEX® Footwear achieve a breathability value up to six times higher than the values specified in EN ISO standard 20345/47.

DURABILITY

Inner lining and upper materials of GORE-TEX® Footwear have to withstand up to four times more abrasion movement than specified in by the EN ISO standard.

GORE-TEX® footwear far exceeds the requirements of EN ISO 20345 for waterproofness, breathability and durability.

Codeveloped collection by, and for major players in, the construction, rail transport, cleaning and energy sectors.

The « SYNERGY » line is a perfect union between a profile cleat system for outside use and a sole capable of releasing energy.

SYNERGY styles feature a sole with BASF's Infinergy® technology that returns over 55% of the energy stored while walking. All this for exceptional cushioning and a guaranteed antifatigue effect.

The SYNERGY collection is evolving thanks to the PU "scuffcap", which guarantees superior, optimal protection at the front of the foot.

This "scuffcap" allows you to work on your knees without the risk of premature wear and tear of the material on the front of the toe cap.

#### MORE SECURITY, FOR MORE SERENITY, AT ALL TIMES

Vibram® is the world leader in the technological development and manufacture of high-performance rubber soles, for the outdoor, work safety, lifestyle, orthopaedic and repair markets. For more than 80 years, the unmistakable yellow octagon has been the symbol of a company synonymous with quality, performance, safety, innovation and design.

From the moment we created the first rubber sole for mountaineering, Vibram® has become a benchmark in the footwear market. Vibram® soles – derived from a desire to boost safety and protection – are known all over the world, and are the result of a constant commitment to research and development.

This stroke of genius led to the début of the first soles branded Vibram® – a combination of the inventor's first name and surname – and the famous Carrarmato sole that revolutionised both mountaineering and the world of footwear, allowing for unprecedented performance in terms of abrasion resistance, traction and grip..

The Vibram® story began in 1936, when Vitale Bramani (an Academic of the Italian Alpine Club), on his return from a mountaineering ascent that ended in tragedy (1935), came up with the idea of making footwear soles using the same technique employed for making vehicle tyres.

#### VIBRAM® TESTS

Each and every Vibram sole must pass 3 levels of testing before it reaches the market. This series of tests ensures the product quality meets and use requirements.

#### LAB TESTS

The physical-mechanical characteristics of the soles are tested by machines. The objective is to measure the resistance of the sole sole to slips, abrasion, elasticity, hardness and density.

#### IN VIVO TESTS

- Indoor testing on shoes equipped with Vibram® flat soles.
- Tests performed by technicians according to a specific protocol.

The objective is to measure the performance of the gum to rubber.

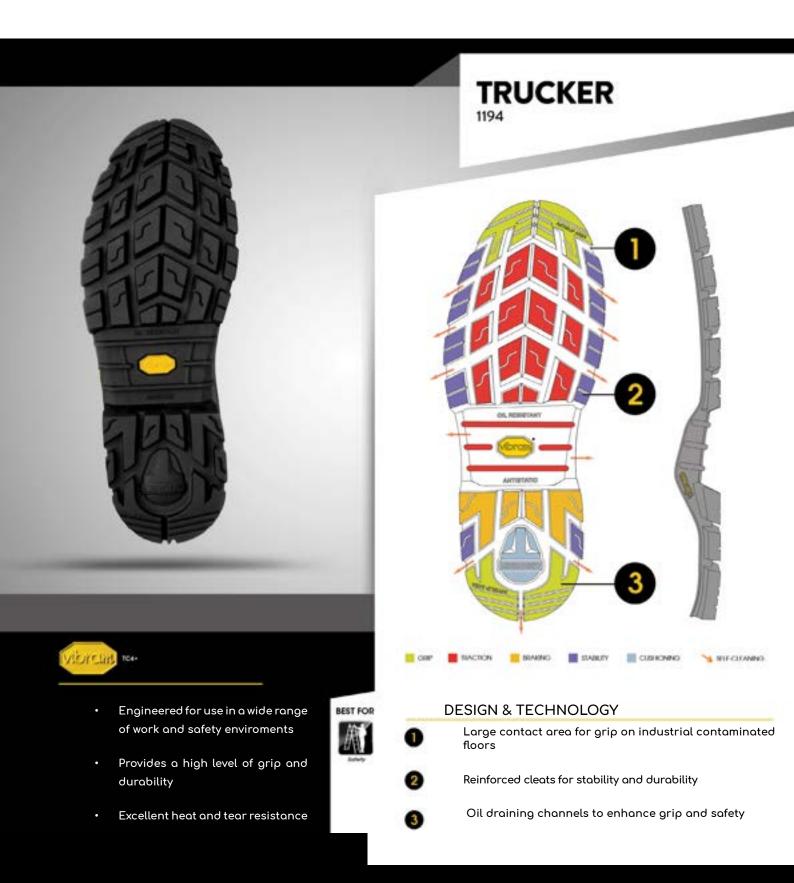

#### FIELD TEST

- Indoor Testing on shoes with flat sole design.
- Run on shoes by humans with scientific protocols ("invivo") Test samples: flat design soles to focus on compound performance Output: trustable compounds comparison.

The secret of Vibram® performance lies in the perfect combination of the hyperfunctional DESIGN of the soles and the use of exclusive RUBBER varieties.

These models are DGUV 112-191 certified, which means they can be substituted with a SECOSOL® orthopaedic liner.

# 

The safety footwear in the SPECIALS collection uses technologies that ensure optimum protection for users, extend product life and improve comfort while preserving foot health.

These 3 new models have been specifically developed for high-risk jobs in heavy industry, steelmaking and industrial maintenance, as well as for metalworkers, boilermakers and locksmiths.

The Vibram® sole offers a high level of grip and durability as well as excellent resistance to heat and tears.

The WG\* Standard guarantees that the upper can withstand small molten metal splashes.

\*Test conducted according to the requirements of standard EN ISO 20349-2:2017 + A1:2020

- Water-repellent full-grain PUR leather.
- SUAVE full-grain nubuck leather, velvety, supple and breathable.
- 3. RIO suede leather, supple and highly breathable.
- Water-repellent full-grain matte leather with pull-up finish. Very good waterproofing. 4.
- AP23™ full grain leather, a Jallatte exclusive, 100% natural, is water and oil repellent. It is 10% to 15% thicker than most other leathers used in safety footwear (2.4mm), guaranteeing excellent durability over time. What's more, its resistance to water penetration for exceeds that required by the European standard.
- Water-repellent full-grain BTP leather with pull-up finish. Excellent waterproofing, no water penetration after 7 hours of testing.

PUTEK® technology uses new yarns that are highly resistant to abrasion, for greater tenacity and enhanced performance. These highly resistant, water-repellent fabrics make it possible to produce ultra-light, ultrabreathable products. PUTEK® SPIDER is made from 68% recycled polyester.

#### **ASEPTANE ASEPTANE-R**

Aseptane microfibre is impregnated with resins, making it exceptionally waterproof and breathable, and easy to clean and maintain. This microfibre is ideal for use in damp environments and to protect against fluid splashes. RECYCLED ASEPTANE is made from 40% recycled polyamide.

- Microfibre is a material aesthetically similar to leather, made from extremely fine filaments of polyester, polyamide (nylon) or a mixture of the two. Lightweight, robust and durable, it offers excellent breathability, water resistance and abrasion resistance. And it's easy to care for.
- microfibres are made from Recycled leather and nubuck 40% recycled materials. The velvet-look microfibre is made from 50% recycled materials.
- Light microfibre is as waterproof and breathable as standard leather.

Highly abrasion-resistant, ultra-breathable 100% polyester technical fabric for extended wear and optimum foot comfort.

A technology consisting of a superstructure with a TPU grid designed to give better support to the upper made from lightweight, breathable materials. It also uses the 'seamless' concept, which reduces the number of seams on the upper, helping to extend the product's lifespan.

### LINING

The GORE-TEX® membrane is an extremely thin layer of expanded polytetraflouroethylene (ePTFE). It contains more than 1.4 billion pores per cm². It is all these pores that ensure the properties of GORE-TEX® fabrics. It is only 0.01mm thick. So it's attached to a high-performance lining or outer fabric, creating a GORE-TEX® laminate.

**Thermally insulating** and breathable fibre designed to ensure the perfect thermal balance inside the boot in every situation. Breathable in summer and warm in winter.

Innovative, antibacterial, technical 3D mesh lining that combines high performance breathability and abrasion resistance with a soft, comfortable feel. Its unique 3-layer structure promotes thermoregulation to keep feet dry and comfortable. The Surf-R lining is made from 66% recycled material.

3D mesh lining, a three-dimensional fabric combining foam for protection and comfort and an open structure (grid) for peripheral foot ventilation. The lining has a special honeycomb structure, using micro ventilation channels to ensure a high level of breathability. It is abrasion, tear and cut resistant.

3D mesh lining, micro-ventilated technique, smooth appearance, 3-layer structure combining textile mesh, foam and reinforcement grid. High mechanical resistance (abrasion and tearing) and quick drying.

Extremely supple PREM calf leather in white, with a smooth grain finish and premium quality for absolute comfort and well-being.

# TOE CAP

Steel toe cap resistant to 200 J. Perforated for better foot ventilation.

Lightweight, non-magnetic 200J aluminium mouthpiece. While offering the same strength, it is 51% lighter than a steel tip. More resistant to impact and compression, the B toe cap meets the most stringent requirements of the new EN ISO 22568-1:2019 standard (new requirements and test methods for footwear components).

Synthetic polymer toe cap, resistant to 200 J, non-magnetic and athermic. Shape memory toe cap, returns to its initial shape when crushed, making it easier to remove the foot. More resistant to impact and compression, the B toe cap meets the most stringent requirements of the new EN ISO 22568-2:2019 standard (new requirements and test methods for footwear components).

# **INSOLE**

# SOFT SOFT Light

SOFT insole made using BASF® dynamic polyurethane with memory foam, that is heatsensitive and active over the entire surface of the foot.

It is right beneath the soles of the feet that SOFT improves weight distribution by cushioning pressure points and allowing positive energy to be returned.

# SOFT+GEL

Bi-material comfort insole: SOFT+GEL consisting of:

1. a SOFT insert made using BASF® Dynamic polyurethane with memory foam, which is heat-sensitive and active over the entire surface of the foot.

It is right beneath the soles of the feet that SOFT improves weight distribution by cushioning pressure points and allowing positive energy to be returned.

2. a two-zone GEL insert with high cushioning capability at the heel and anatomical extension beneath the midfoot.

Its design allows for improved heel shock cushioning while still providing excellent sole support.

# This removable insole is made of 2 materials:

- A 'SOFT' BASF® dynamic polyurethane layer including memory foam, which is heatsensitive and active over the entire surface of the foot.
   Under the soles of the feet, SOFT improves weight distribution by reducing pressure points and the feeling of discomfort.
- 2. An integrated 'MAXI'-size anti-fatigue insert made of BASF® Elastopan, an elastomer that is used in anti-fatigue mats.

  Positioned beneath the base layer, this MAXI insert cushions and alleviates stress on the body,

which is forced to stand upright for many hours a day, both while in motion and while walking, thus reducing the risk of MSDs (musculoskeletal disorders) in the lower limbs.

The Maxi-Soft Duo recycled insole is made from Elastopan and Polyurethane Dynamic Biomass Balance from BASF®.

SELECT' insole in extremely supple calf leather and Dynamic polyurethane from BASF® with shape memory, cushions pressure points, improves weight distribution and absorbs heel shock. Anatomically shaped and perforated, SELECT' ensures absolute comfort and wellbeing.

Coated with an anti-bacterial and breathable fabric, reinforced in the heel area for better shock absorption. The insole is anatomically designed, antistatic, removable and covers 100% of the foot's surface.

# **ANTI-PUNCTURE INSERT**

Extra-flexible, high-tenacity textile mounting pad: non-magnetic, athermic, covers 100% of the pad surface, complies with standard EN ISO 22568-4:2020 and has a resistance of 1,100N. Flextane R is made from 50% recycled polyester.

Extra-flexible insole made from high tenacity textile with a resistance of 1,100N, non-magnetic and athermic, which covers 100% of the surface of the foot and complies with standard EN ISO 22568-4:2021.

Stainless steel anti-perforation midsole for maximum protection and resistance to 1,100N.

Composite anti-puncture insert made from non-woven fabric, 54% lighter than a standard anti-puncture insert, complies with standard EN ISO 22568-4:2021, is antistatic, sewn directly onto the upper and covers 100% of the foot for all-round protection. This insert is made from 77% recycled polyester.

# SOLE

BASF® PU/PU

BASF® PU/PU sole with a sporty, urban sport featuring a linear profile and excellent slip-resistance.

PU2D/E-TPU Infinergy by BASF® size XL with a low density of 0.19

Designed with an innovative material from the world of running, this triple density insole offers dynamic performance in 3 phases: shock absorption, energy accumulation and dynamic restitution. It's ideal for anyone who has to travel frequently or over long distances every day.

**J-**ENERGY

#### PU2D/E-TPU Infinergy of BASF®

Designed with an innovative material used in the world of running, this triple density sole ensures dynamic performance in 3 phases: shock absorption, energy storage and dynamic return. They are ideal for all those who are subject to frequent movements and who travel long distances daily.

J-HOP!

## PU/PU Extra-Rebound 41,5% by BASF®

With over 40% energy resistance over the entire surface, both in the support phase and in the thrust phase, this PU/PU Extra-Rebound 41,5% by BASF® sole brings lightness, wellness and comfort, reducing the feeling of tiredness both in an upright position and in prolonged activity situations.

### PU2D/Elastopan by BASF®

This triple density sole made with a revolutionary elastomer used for the production of antifatigue mats distributes the plantar pressures; it is able to absorb and relieve body stress by reducing the traumas associated with a prolonged static working position. Ensures high performance in terms of comfort, balance and shock distribution.

TRIFTANE X is equipped with a new Vibram® sole, which guarantees more durability and better resistance to slipping and on hot surfaces.

# J-ESCAPE SPECIALS

Decades of experience and excellence in sport and mountaineering at the service of the working world today. The Vibram® rubber sole is suitable for every situation, light but extremely resistant and performing even in extreme conditions.

# **Softane Softane Softane Softane**

The special bi-density polyurethane SOFTANE is designed to achieve the perfect balance between comfort, lightness and durability. The midsole is developed with a density such as to ensure flexibility and absorption of vibrations and impacts with the ground, while the outsole is designed to resist to abrasion, hydrocarbons, oils and grease.

The Vibram® Triftane sole made from high-performance rubber guarantees better mechanical resistance to abrasion, detachment and tears. It brings a higher level of grip to reduce the risk of slipping, but also better protection against hot floors (HRO certification/resistance to hot contact up to 300°C).

# **VARIOUS**

BOA® Fit System is a rapid, easy and accurate lacing system with no need for laces. Eliminates the risk of falls and untying laces.

Xtensible™ non-tied elastic laces with adjustable Stop-Lace lock :

- \* Eliminates the feeling of having swollen feet
- \* Allows them to be put on and taken off rapidly
- Reducing risk of fall

Speed, safety, comfort and hygiene at the service of the workers

QuickLioTM Technical "2 in 1" lace loop: holds laces in place for quick lacing and untie.

TPU cushioned insert positioned on the ankle area enabling the full protection of the ankle bones against possible side impacts. Conforms to the additional standards (AN) of EN ISO 20345:2011.

Innovative "multi-contact" system on the insole for dissipating electrostatic charge.

Thanks to LINK-ESD™, you will feel, step by step, as if you were connected to the ground thanks to a device certified according to the EN 61340-4-3 and EN 61340-5-1 standards, which ensures the total absence of risks associated with possible electrical discharges harmful to electronic and computer equipment.

Internal orthopaedic insole approved for safety footwear in accordance with DGUV 112-191 on the use of foot and knee protection.

DGUV 112-191 certification allows the replacement of the insole supplied by Jallatte with a SECOSOL® orthopaedic insole manufactured by Hartmann Matthias Orthopädie und Sport GmbH laboratories in Dillenburg, Germany.

DISCONTINUED ITEM

Despite a revision of EN ISO 20345 in 2022, EN ISO 20345:2011 is still valid for new certification until November 11, 2024.

Therefore, all certificates issued up to this date will be valid for 5 years, i.e. until November 11, 2029.

During this transition period, the two versions of the standards will coexist.

In our next 2024 catalog, we'll be unveiling all aspects of these new standards requirements, the new CE markings markings and their impact on the technological and safety choices of our collections.

CATEGORIES		FUNDAMENTAL REQUIREMENTS		ADDITIONAL REQUIREMENTS	SYMBOLS
EN ISO 20345:2011 Toe 200 J/15kN	EN ISO 20347:2012	Class I (shoe)	Class II (boot)		
SB		•	•		
S1		•		Closed heel area Antistatic properties Energy absorption in the heel	A E
	01	•		Resistance of the sole to hydrocarbons	FO
S2	02	•		Same as S1/01 plus: resistance to water penetration	E/FO WRU
\$3	03	•		same as \$2/02 plus: resistance to perforation. Cleated soles	A/E/WRU/ FO/P

	ADDITIONAL SYMBOLS USED	REQUIRED MINIMUM VALUES EN ISO 20345:2011 + EN ISO 20347:2012	
	Resistance to perforation	Р	≥ 1100 Newton
	Electric resistance: - Antistatic - Conductive	A C	between 1x10° Ω a 1x10° Ω < 1x10° Ω
	Resistant to harsh environments : - Cold isolation - Heat isolation	CI HI	by temperature < 10°C by temperature > 22°C
	Resistance of the sole against contact heat	HRO	contact at 300°C for 60 secs – no melting
	Resistance of the sole Against hydrocarbons	FO	always present by EN ISO 20345:2011 and by EN ISO 20346:2011 but to be specified when required by EN ISO 20347:2012
	Energy absorption capacity in the heel area	E	≥ 20 Joule
	Resistance of the whole shoe to water penetration	WR	no penetration within first 15 mins. After 100 flex should not penetrate more than 3 square Cm
	Resistance of the upper to water penetration	WRU	> 60 mins - Absorbance < 30%
1	Ankle protection	AN	average value > 20kN
	Shoe with metatarsal protection	М	height after shock > 40 mm (tg 42)
	Cut resistant upper	CR	I factor > 2,5
	Features spiked soles	NO SYMBOL	Stud height >=2,5 cm
ĺ			

#### Slip resistance of the sole Regulation: EN ISO 20345:2011 / 20347:2012

Marking symbol	Required conditions provided by the regulation			
SRA Test surface: ceramics Lubricant: water and detergeant	≥ <b>0.32</b> flat footwear ≥ <b>0.28</b> footwear inclinated 7° towards the heel			
SRB Test surface: stainless steel lubricant: Glycerin	≥ <b>0.18</b> flat footwear ≥ <b>0.13</b> footwear inclinated 7° towards the heel			
SRC	Both above described conditions required			

Personal Safety Equipments (P.P.E.) are ruled by two European regulations:

- the 89/686 CE which defines the obligations of the producer
- the 89/656 CE relating to the use, which defines the obligations of the companies and the workers.

Safety, protectional and professional footwear are identified as Personal Safety Equipments

#### OBLIGATIONS OF THE PRODUCER

By purchasing Jallatte® products you are assured that all footwear have met the certification procedures based on the European regulations, as shown by the CE marking. Each box contains an informative note of use which establishes the risks covered. For every model, Jallatte® issues a declaration of conformity.

# OBLIGATIONS OF THE COMPANIES AND THE WORKERS

besides the priority of collective protection, the directive establishes an obligation of health and safety. The employers must:

 locate the risks which cannot be avoided through collective protection

- select the P.P.E. suitable and appropriate to the risks, in consultation with the R.S.P.P.
- select the P.P.E. compatible with the types of work to be executed and with the principles of ergonomics
- make the P.P.E. available to the workers
- monitor actual usage
- $\bullet$  provide the P.P.E. for free and for personal use
- ensure the proper functioning, the hygienic status and maintenance
- proceed or o carry out periodical general checks for some categories of P.P.E.
- ensure information, education, instruction, training of the use of P.P.E. And the risks covered
- $\bullet$  prepare a delivery note of the P.P.E. For the worker

#### And further

- the P.P.E. are not to be considered prizes in kind
- the responsability of the worker is only disciplinary (omission to wear the protections) and is subordinated to a criminal matter responsability of the employer

#### THE CERTIFICATION PROCEDURES

All Jallatte® footwear belongs to class II (protection against severe risks). Therefore all footwear is submitted to the specific CE examination at an enabled blody at a European level'.

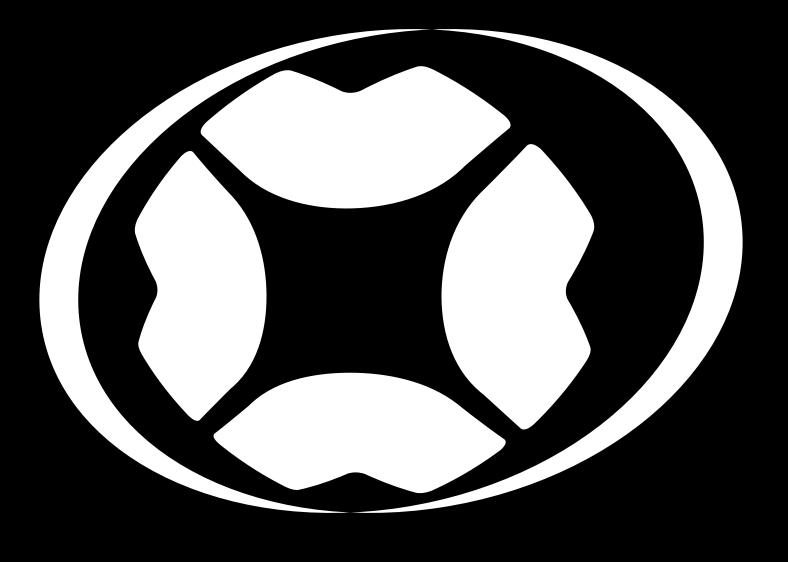

Basing on the analyses and the executed tests for this type in conformity to the regulation EN ISO 20344:2011, on the technical documentation and the informative notre of use, a CE attestation is released, valid in whole Europe.

#### Notes

It is forbidden to affix on a P.P.E., on it's box and on any other pertinent document any brand or writing susceptible to create confusion with the markings provided within the framework of the certification procedures in conformity with Art. R233.50.1

This catalogue replaces all previous documents.

With the aim to improve our collections, all products included in this catalogue may be replaced and/or modified. Images are for illustration purposes only and are not legally binding.
